January 29, 2019, 10:41 pm, [Wordpress Blog](#)

Hello [TimesPix](#) visitors. You know that blogs are the very important source of knowledge sharing tools. Therefore, we forward this page with WordPress tutorial pdf complete guide.

In this section, you will know how to set up a blog using WordPress, the most popular content management system(CMS) using Php and MySQL. If you are a new blogger and want to create a new blog through WordPress, then you

are at the right place. Here you will learn to set up a blog within 20 minutes easily.

To set up a WordPress blog you need a web hosting provider and a domain name and the rest things are available free if you want to minimize your budget.

In this section you will learn the following main things:

- **How to choose and buy a web hosting provider and a suitable domain name for your blog.**
- **Installation and setup of WordPress in your cPanel.**
- **How to set up your blog basic settings in WordPress dashboard.**
- **The basic WordPress plugins you are required to install.**
- **How to make your website to load past.**
- **WordPress SEO basic guide.**

There are lots of considerations you need to look at while creating a website using WordPress. We analyze the whole tools and frameworks so that you may easily learn how to set up a blog using WordPress.

First step in creating a WordPress Blog

The very first requirement to have a WordPress site is web hosting provider.

Web hosting works two tasks:

1. It will store all of your website data and all of your coding, files and your database.

2. It connects your information to the search engines that you write or share through your blog site.

You will find millions of hosting providers such as Godaddy, Blue host, site ground, WP engine, immotion hosting etc. Most of them are very popular and experience in this field. However, to create a website blog with fast loading speed you need to consider a few things:

First, the type of hosting server you are required for your blog. Most of the websites hosting providers store your data in servers.

As a result , to minimize the cost of running servers they share server resources such as RAM, CPU power etc with lot of sites. It means that around 50 to 300 sites may be running from the same hosting servers. Hosting servers are like your computers running 24 x 7 days a week. Here are a few choices for hosting types:

- a. Share Hosting
- b. Virtual private server hosting (VPS)
- c. Dedicated server hosting
- d. Cloud Hosting

Among the poor hosting types, the selection is depending on the number of visitors at the time. If you are a new blogger and just starting your blog, then it is better to go with share hosting. Share hostings are less expensive and best for limited budget sites. I personally recommend to go with blue host or

immotion hosting services. This site is hosting by immotion hosting and they have lots of plans which are reliable services with uptime 99.99%

Selecting a domain

If we suppose that web hosting is your home and we can say that domain is your name. If a person looking for you, then they have to visit your home. Selecting a domain is not easy. You may easily by a domain from most of the hosting providers but I personally prefer Godaddy or blue host for buying a domain.

There are two options to choose a domain:

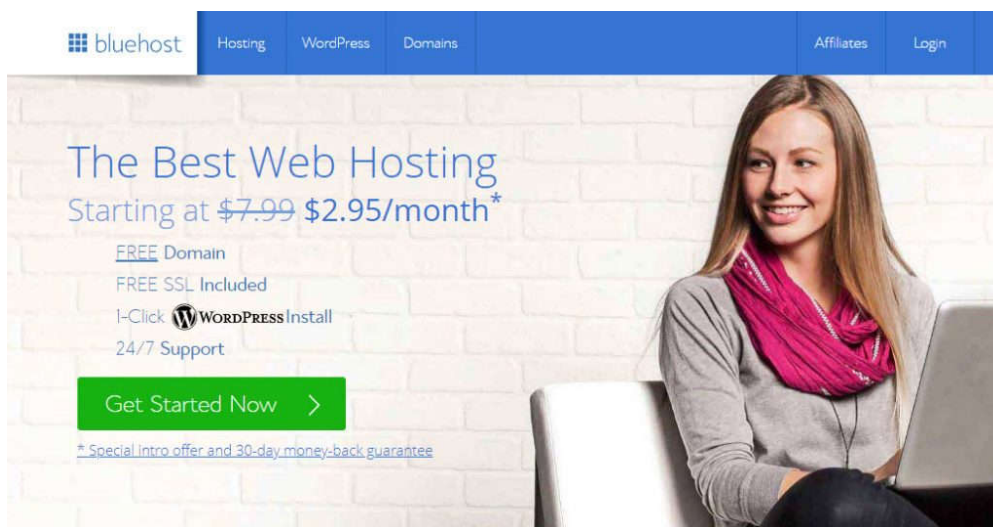

1. First you can define a new name for your domain which must be unique and should not be already taken by other.
2. Secondly, you may go for buying a auction domain which is previously sold to other and now he is selling in the market. You may also looking for expired domains which means that someone is previously using them for a period of time and now they are not in use.

Whatever the option you want to choose, the key point is a new domain is like a stranger who needs some time to create his reputation so that any search engine like Google may rely on him. The next important point is that the domain you buy or an expired domain-it should be higher authority means trust by search engines. The domain name cost you around \$ 10-\$ 15. These are the two paid options which you have to spend money for a blog.

How to Sign up Web Hosting

First of all, you need to visit a web hosting provider site. For example purpose we are using bluehost.com signup process. The benefit of blue host is that they provide a free domain with their hosting plans.

Signup Process

Step 1:

Visit bluehost.com and select a hosting solution. Click on the 'Get Started Now' button.

	basic	plus	choice plus recommended
	normally \$7.99 \$2.95* per month	normally \$10.99 \$4.95* per month	normally \$14.99 \$5.45* per month
	select	select	select
websites	1	unlimited	unlimited
website space	50 GB	unmetered	unmetered
bandwidth	unmetered	unmetered	unmetered
performance	Standard	Standard	Standard
included domains	1	1	1
parked domains	5	unlimited	unlimited
sub domains	25	unlimited	unlimited
email accounts	5	unlimited	unlimited
email storage	100 MB per account	unlimited	unlimited
marketing offers	—	\$200 included	\$200 included
	select	over \$24/yr in extras 1 SpamExperts select	over \$80/yr in extras 1 SpamExperts 1 Domain Privacy CodeGuard Basic select

Step 2

Next step is to select a plan for your website and click 'select' button.

sign up now

	Add tax exemption
	Tax Exemption Number

If you want to keep your registration details secretly, then you can also select privacy protection at a cost of \$ 0.99 per month. That's it. Now you are able to register your domain and web hosting packages in blue host.

How to install WordPress in blue host:

If you sign up for blue WordPress hosting with a free domain, then blue host will automatically install WordPress. However, you will see a page with 'coming soon page'. Even though, WordPress is installed in your site but it is not active and you need to set up your WordPress site. You need to land sector blue host dashboard account.

In the Control Panel, just go to 'My Sites' button on the left. Here you can login to your existing WordPress site or you may also create a new blog Create Site button.

Another way of creating a website is by going to marketplace> marketplace home and click on add website button. Here, you need to enter your website name and little tagline of your site information. Click on 'Next' button. Now you

need to select your domain name and optionally you may install WordPress in domain subdirectory. Otherwise, leave it blank and click on next button.

This will install WordPress on blue host a panel. Now you can login to your WordPress dashboard.

How to install WordPress using cPanel:

First of all, you need to go to cPanel after logging to blue host admin account.

Now go to 'website' section in cPanel and click on install WordPress. Now you have to select your domain name or any subdirectory of the domain if you want to install it there.
